

How to Create a Great Endcap

INSTRUCTIONS: In this activity, your job is to create an endcap. You will decide what products to put on the endcap and how to arrange those products.

1. From the list below, circle the items you choose for your endcap. Remember, you are only creating a single endcap. (You do not have to use all of the products, only use those products you want for your endcap. There is more than one correct answer.)

- Worklight
- Caulk
- Wet/Dry Vacuum
- Storage Containers
- Extension Cord
- Lawn Bags
- Shovel
- Circular Saw
- Antifreeze
- Rake
- Gloves
- Paint
- Storage Container Lids
- Pliers
- Hammer
- Screwdriver
- Nails
- Toolbox

2. List at least two reasons you think this is a good endcap.

3. Now, on the diagram below, show how you will arrange these items on your endcap. If you need to reconfigure the shelves on your endcap.

4. After watching the lesson and learning more about endcaps, is there anything you would change about your endcap?
